

ASD ASSESSMENT

Initial Consultation

Initial consultation involves a screening assessment using a variety of tools such as the Social Communication Questionnaire (SCQ) + the Autism Diagnostic Interview-Revised (ADI-R) with the caregiver.

Observation Assessment

The next session involves an observational play or activity-based assessment using the Autism Diagnostic Observation Schedule, Second Edition (ADOS-2), a semi-structured, standardised assessment of communication, social interaction, play, and restricted and repetitive behaviours.

Observation Assessment

The child is then observed in at least one additional setting such as their daycare; and additional information about their communication, social interaction, and behavior is collected from their educational and therapy providers.

Diagnostic Report

Clinician collates the above assessment data into a diagnostic report. In addition to information relating to an ASD diagnosis, the report outlines strategies for addressing any challenges highlighted by the assessment.

Pricing Information

Initial consultation, as well as a follow up appointment to discuss the assessment are bulk billed.

The remaining cost of the assessment is
\$ 1,414.2
